Professional Summary

Computer Applications graduate (9.01 CGPA) specialising in AI evaluation, data quality, and structured data workflows. Hands-on experience building API-driven applications with validation logic and standardised output. Trained in Python Generative AI, and Prompt Engineering. Seeking AI Evaluation, Data Annotation, or entry-level Data Analysis roles.

Work Experience

Independent Projects & Training

2024 – Present

AI Evaluation & Data Handling

- Processed and validated structured data from external APIs; ensured accurate input handling and consistent output formatting.
- Applied prompt engineering techniques to generate and refine structured AI responses.
- Performed manual data validation, verification, and formatting across project datasets for completeness and correctness.
- Followed detailed specifications and structured guidelines – reflecting annotation and AI evaluation workflows.

Projects

Morphix – Mixed-Media Video Studio | *Next.js, TypeScript, FFmpeg, PostgreSQL, Redis, Python*

- Built a full-stack video processing platform where users upload footage, select a mixed-media style, and configure output settings; designed REST API routes for job creation, status polling, and result streaming.
- Implemented an asynchronous job pipeline using Redis streams and a Python worker service to orchestrate FFmpeg frame extraction, AI-based style transfer, and video recompilation.
- Designed a pluggable AI-provider interface (ComfyUI integration with mock fallback) allowing the style-transfer engine to be swapped without changing the core pipeline – reinforcing structured, spec-driven system design.

Aerophone – Gesture Theremin | *JavaScript, Web Audio API, HTML, CSS*

- Built a web-based gesture-controlled instrument that turns real-time cursor/touch input into audio, using the Web Audio API for live sound synthesis and an oscilloscope-style waveform display.
- Implemented responsive, accessible UI (keyboard navigation, focus states) across a custom instrument-panel interface, validated across major browsers for consistent behaviour.

UI Replication – Instagram Clone | *HTML, CSS, JavaScript*

- Created a pixel-accurate UI reproduction against strict design specs, maintaining layout/spacing consistency – mirroring annotation calibration and spec-adherence workflows.

Skills

Core Skills: AI Model Evaluation (Entry-level), Data Quality Assurance & Validation, Structured Data Processing, Microsoft Excel (Data Handling & Reporting), Prompt Engineering (Basic)

Supporting Skills: Python – Beginner (Data Science Basics), API Data Handling, Data Entry & Verification, HTML, CSS, JavaScript, Reporting & Documentation

Certifications

Python for Data Science, AI & Development – IBM via Coursera	Jul 2024
Introduction to Generative AI – Google Cloud via Coursera	Aug 2024
Prompt Engineering for ChatGPT – Great Learning Academy	Nov 2024
Introduction to Cloud Computing – IBM via Coursera	Jul 2024
Introduction to Front-End Development – Meta via Coursera	Aug 2024
Foundations of Digital Marketing & E-commerce – Google via Coursera	May 2024
AMCAT: Data Processing Specialist · Software Dev Trainee · English Proficiency – SHL	Jun 2024

Education

Chandigarh University, Uttar Pradesh

2026 – 2028

MCA

University of Engineering & Management, Kolkata

2022 – 2025

BCA – CGPA: 9.01

Agrasain Balika Siksha Sadan, Kolkata

2020 – 2022

12th Standard (ISC) – 88%

Stepping Stone High School, Kolkata

2007 – 2020

10th Standard (ICSE) – 84%
